Dünyadaki kaynakların hızla tükenmesi, doğanın korunması ve sürdürülebilir yaşam hedefleri doğrultusunda geri dönüşüm hayati önem taşıyor.

Geri dönüşüm, atıkların geri dönüştürülmesi ve yeniden kullanılmasıdır. Bu sadece doğal kaynakları korumakla kalmaz, aynı zamanda enerji tasarrufu sağlar ve çevre kirliliğini azaltır. Ancak bu farkındalık her bireye ulaştığında gerçekten fark yaratıyor.

"Bir damla su kendini okyanus gibi görmeli"

Bu Çin atasözü, bireyin eylemlerinin genel resmin büyük bir parçası olduğunu vurguluyor. Geri dönüşümde de durum böyledir. Tek bir kişi tarafından geri dönüştürülen bir plastik şişe küçük bir adım gibi görünebilir, ancak

Milyonlarca insan aynı adımı atıyor, büyük etki yaratıyor.

Jacques-Yves Cousteau'nun dediği gibi:

Gelecek, sahip olduklarımızı koruyabildiğimizde var olacaktır.

CANSER KUSAT LANPIR

Once upon a time, an endless Ocean lay under the blue sky. The waters of this Ocean were full of colorful fish, sparkling jellyfish and huge whales. Since its waters are clear and clean, it is a perfect habitat for many marine creatures. Every day, sunlight spreads from the surface of the water into the depths, illuminating the underwater world, making the Ocean even more fascinating. There is a mysterious underwater kingdom deep in the ocean. This kingdom is home to many magical places, from moss-covered palaces to colorful coral reefs.

One day, a group of orange fish came to the middle of the Ocean. These fish came from an area where there were other marine creatures trying to escape pollution. Other inhabitants of the ocean wanted to help these orange fish and came together.

Seahorses, whales, fish, sea turtles and even corals came together and decided to help the orange fish. They all started working together to clean the Ocean. They came up with a plan to clean up the pollution, and everyone got to work using their own skills.

MERYEM INANÇ

The little sea horse also listened to what was said and heard that his house and the sea were getting more and more polluted and that they would not be able to live there in the future. He was very scared. He got closer to his father and asked him where and how we would live. In fact, the teacher at school, the turtle, had told him that she had traveled to many seas and that the world they lived in was starting to become polluted. So who was polluting their beautiful world? Didn't he ever think that the home of the polluting seahorse would also be polluted, and maybe they would have to leave this place? Oh my God, where would we go? He thought. He quickly went to his friends and thought they could find a solution to this problem with them.

Whale, starfish, octopus and squid were playing hide and seek in the school garden. Suddenly, his friends saw the Seahorse running towards them quickly. The seahorse joined other sea creatures and gathered with whale, starfish, octopus and squid in the school garden. "Friends," he said, "we must make a plan to combat marine pollution. Our sea is becoming more polluted every day, and this harms both us and other marine creatures." The whale continued, "Yes, you're right. What can we do to keep our sea clean?"

The seahorse replied thoughtfully, "Maybe we can organize beach cleaning events. We should tell people about the importance of keeping the seaside clean."

Whale added, "We can also encourage recycling. Recycling plastic and other waste instead of throwing it into the sea could be an important step." The seahorse smiled, "Great ideas! By acting together, we can keep our sea clean. Now is the time to act together." And so, the sea creatures in the school grounds decided to take action together to combat marine pollution and set out to consult the guardian of the ocean.

RAYAN SHEDIAK

The sea creatures swam with one mission: find the Ocean Guardian! Their trip was tough. Squid hid from hungry sharks, Starfish hitched a ride on a friendly jellyfish, and Whale chased away lampreys with powerful splashes. Finally, they reached a colorful reef – the home of Coral, the Ocean Guardian!

Coral was an old starfish, wise and kind. The sea creatures explained the ocean's growing problem: too much trash! Coral listened sadly. "People forgot how much they need the ocean," she said softly. "Show them its beauty! Make a big underwater dance, a show of how amazing the ocean is. Let them see what they're hurting."

The sea creatures were excited! Whale created giant waves for a dancing floor. Starfish twirled in a colorful parade. Octopus changed colors to show a clean and dirty ocean, side-by-side. Even the shy Seahorse puffed out his chest and danced with a friendly crab.

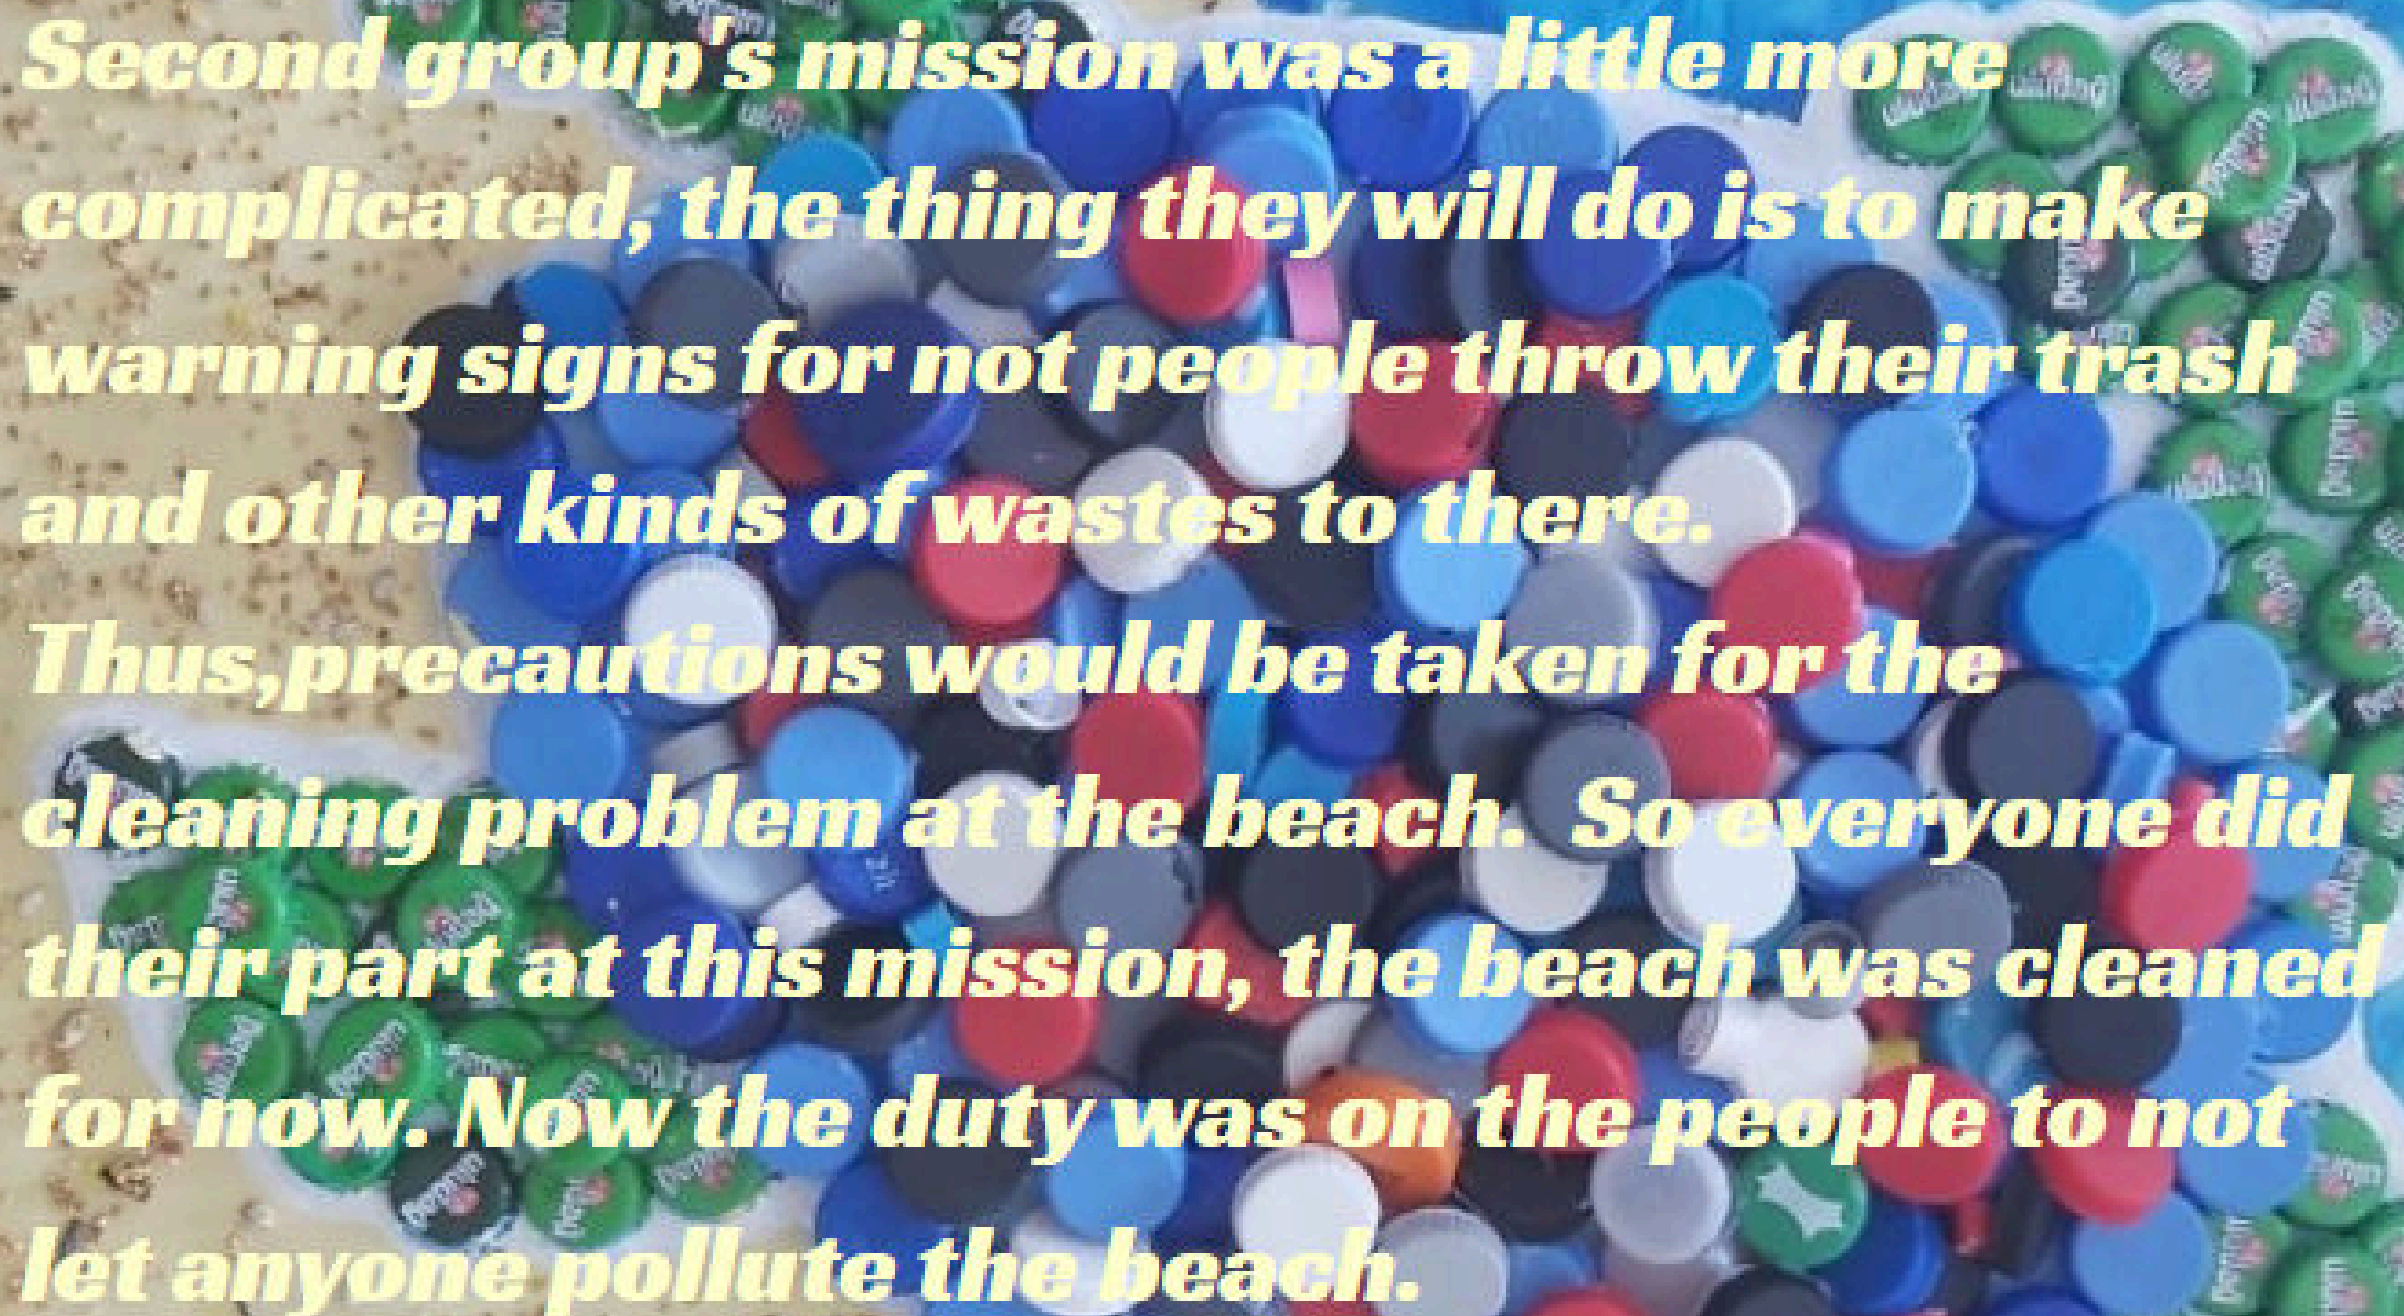

One day, children were playing at the beach when they saw something amazing! Under the water, a magical dance was happening. The children were speechless, their eyes wide with wonder. As the dance ended, a piece of plastic floated onto the shore. One boy, remembering the beautiful show, picked it up and threw it away. "Let's clean the beach!" he said to his friends.

FüsunSARI

After the children had said that to their friends they all clustered and made a plan about how they would clean up the beach. The plan was ready to be implemented, everyone was divided into 2 groups. First groups mission was to pick up the waste's from the beach one by one.

Second group's mission was a little more complicated, the thing they will do is to make warning signs for not people throw their trash and other kinds of wastes to there. Thus, precautions would be taken for the cleaning problem at the beach. So everyone did their part at this mission, the beach was cleaned for now. Now the duty was on the people to not let anyone pollute the beach.

After their work was done, the children sat on the benches on the beach to rest a little. They were tired and a little hungry. They took out the sandwiches and fruit juices they brought from their bags.

After finishing their food, the children threw their food wrappers and packages into the nearby trash can.

A vibrant, cartoon-style illustration of a natural landscape. In the background, there are blue mountains under a bright orange and yellow sky with a few white clouds. A multi-colored rainbow arches across the middle ground. The foreground features rolling green hills, a winding dirt path, and a large tree on the right side. In the bottom left corner, there are several white daisies and yellow flowers. The overall scene is bright and cheerful, representing a clean and beautiful natural environment.

Only one of the children threw the food containers right next to the bench. His friends noticed the situation. They warned him nicely. They told him that we should throw our garbage in the trash can. We should not leave it in the sea or nature. We should always protect nature and the sea.

As the sun set, the children looked with satisfaction at the beach they had cleaned. They decided to do that periodically and to warn the people at the beach about being careful about cleaning. Just as they decided to go home, a dolphin took off from the waves in all its glory and circled around. It looked like it was laughing. After making a pleasant noise it dived back into the water. Children felt that the dolphin thanked to them. They ran home to tell their families what happened during the day.

DILAN ÖZDEMİR/Ercisli Emrah Primary School

At that time, all the creatures under the sea saw that the dance worked and they were very happy. Some thought that this sensitivity would not continue and some said that children could affect other people as well. One of the wise fish said that only good children can build a good world. This time, all of them danced to celebrate their success and happiness.

The children understood how important their actions were after observing the movements of the dolphin. When they recounted their experiences to their family members at home and were honored by their families, they couldn't sleep a wink all night.

The next morning, their first task was to gather and share the incident they had experienced at school. They organized a poster and slogan

Özgür ŞAHİN
Cumhuriyet İlkokulu

Many participants supported the organized competition. The most liked work was the turtle made with bottle caps.

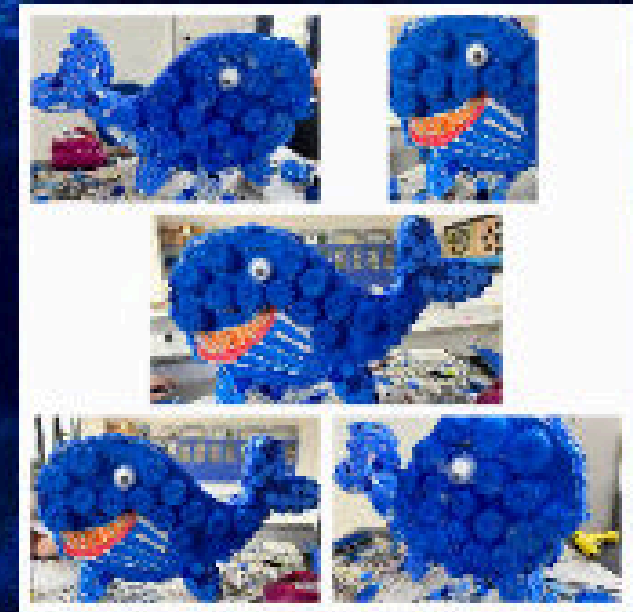

Özgür ŞAHİN
Cumhuriyet İlkokulu

One of the students said "Let's show that turtle to our parents! I think they will like it. After that, we can share our idea about saving sea life with them. Maybe they will help us!" One of the students said, "What if they don't?" Then the first student said, "If we speak efficiently, they will get impressed." All of the students agreed about this plan. They looked forward to the end of the school day, so they could go home and start to their plan.

BURCU ÜNVEREN

PRIVATE MUGLA TAC SECONDARY SCHOOL

The first student went home in the evening and talked about the turtle during dinner. Her mom said, "You and your friends are very creative and careful kids. I think we should support you with your father.". The second kid explained it on the way home to his father but his father said "So, what can we do about it? We cannot save the world all alone. Even though me or you do something, other people keep polluting the oceans".

They had fun with everyone there. They prepared a nice feast to eat at the end of the party. They enjoyed the food they ate.

Nagihan KIBICI

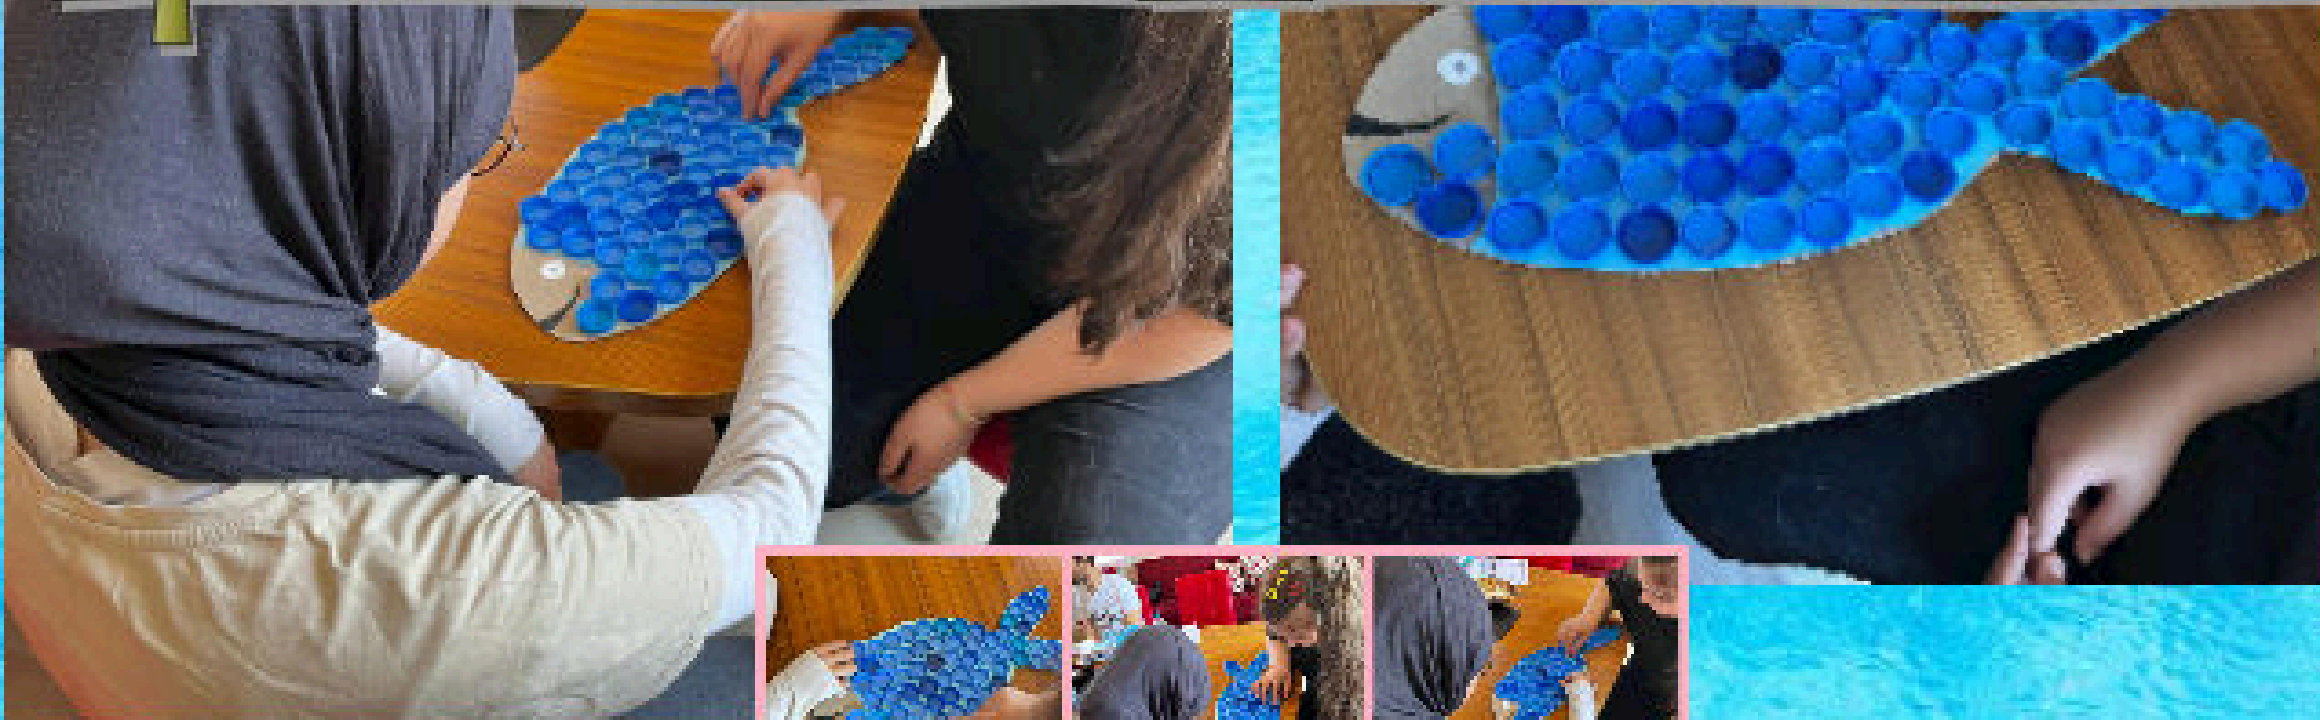

That day, there was joy among the fish in the sea.

All the fish and turtles were very happy. The next day, they talked among themselves and decided to work to raise awareness among people about not polluting the seas and protecting natural life.

An idea came to their mind: They would throw all the garbage thrown into the sea back to where people live.

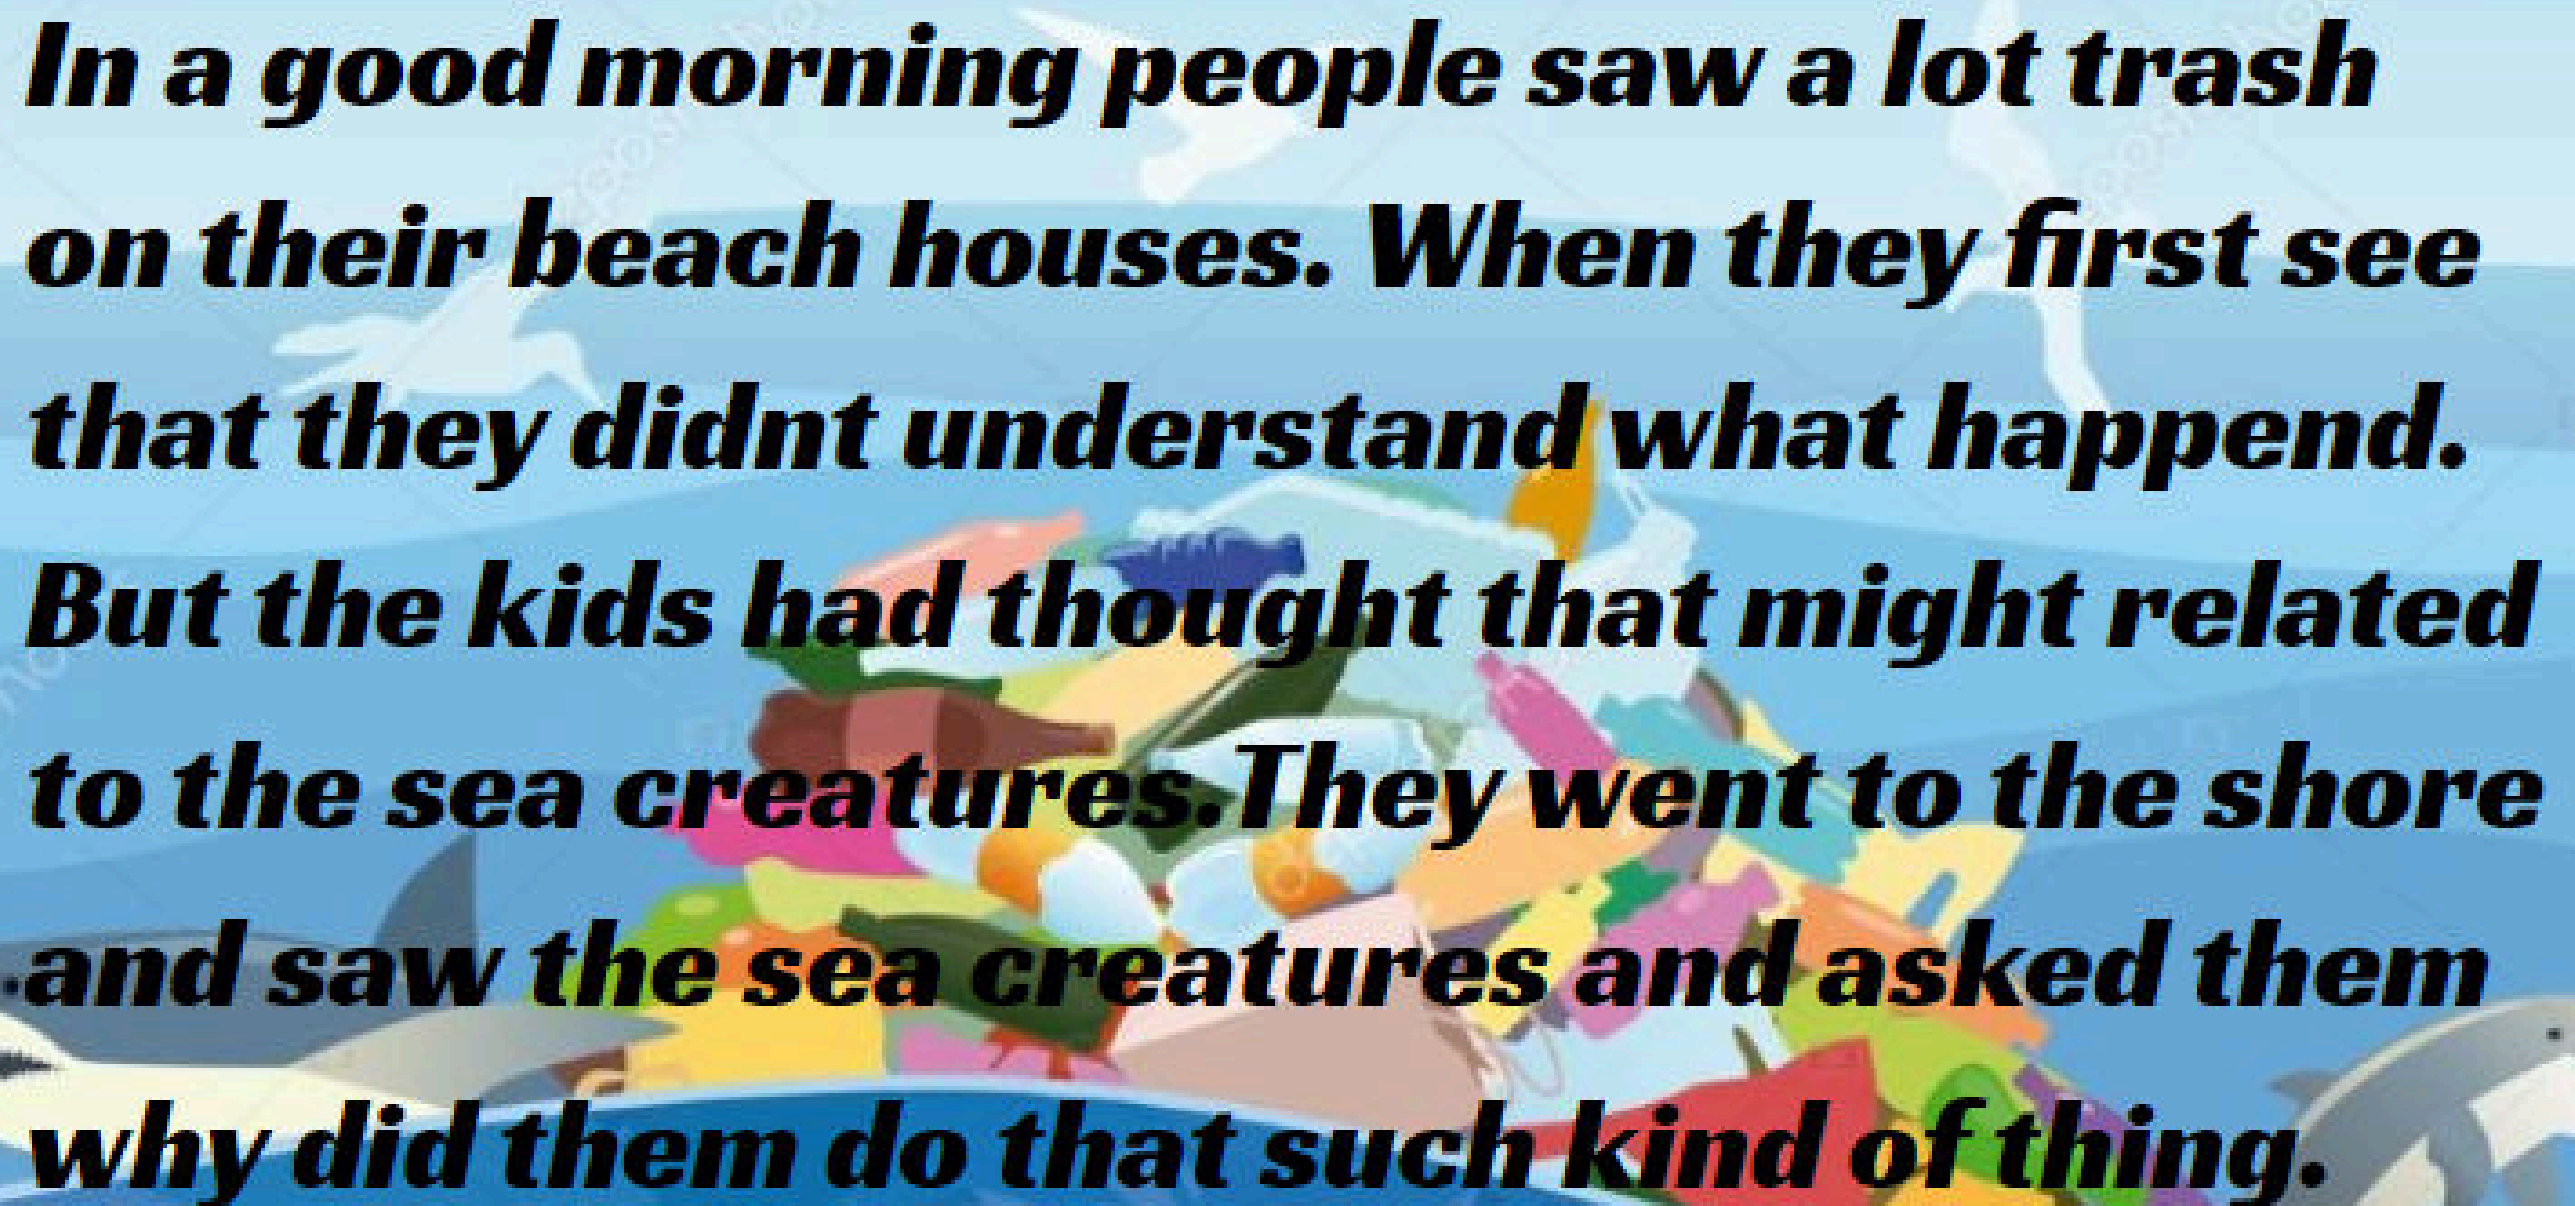

Karpuzlu Anatolian Imam Hatip High School

They thought this plan would work. Would people want there to be garbage where they live? By doing this, they would take revenge on people.

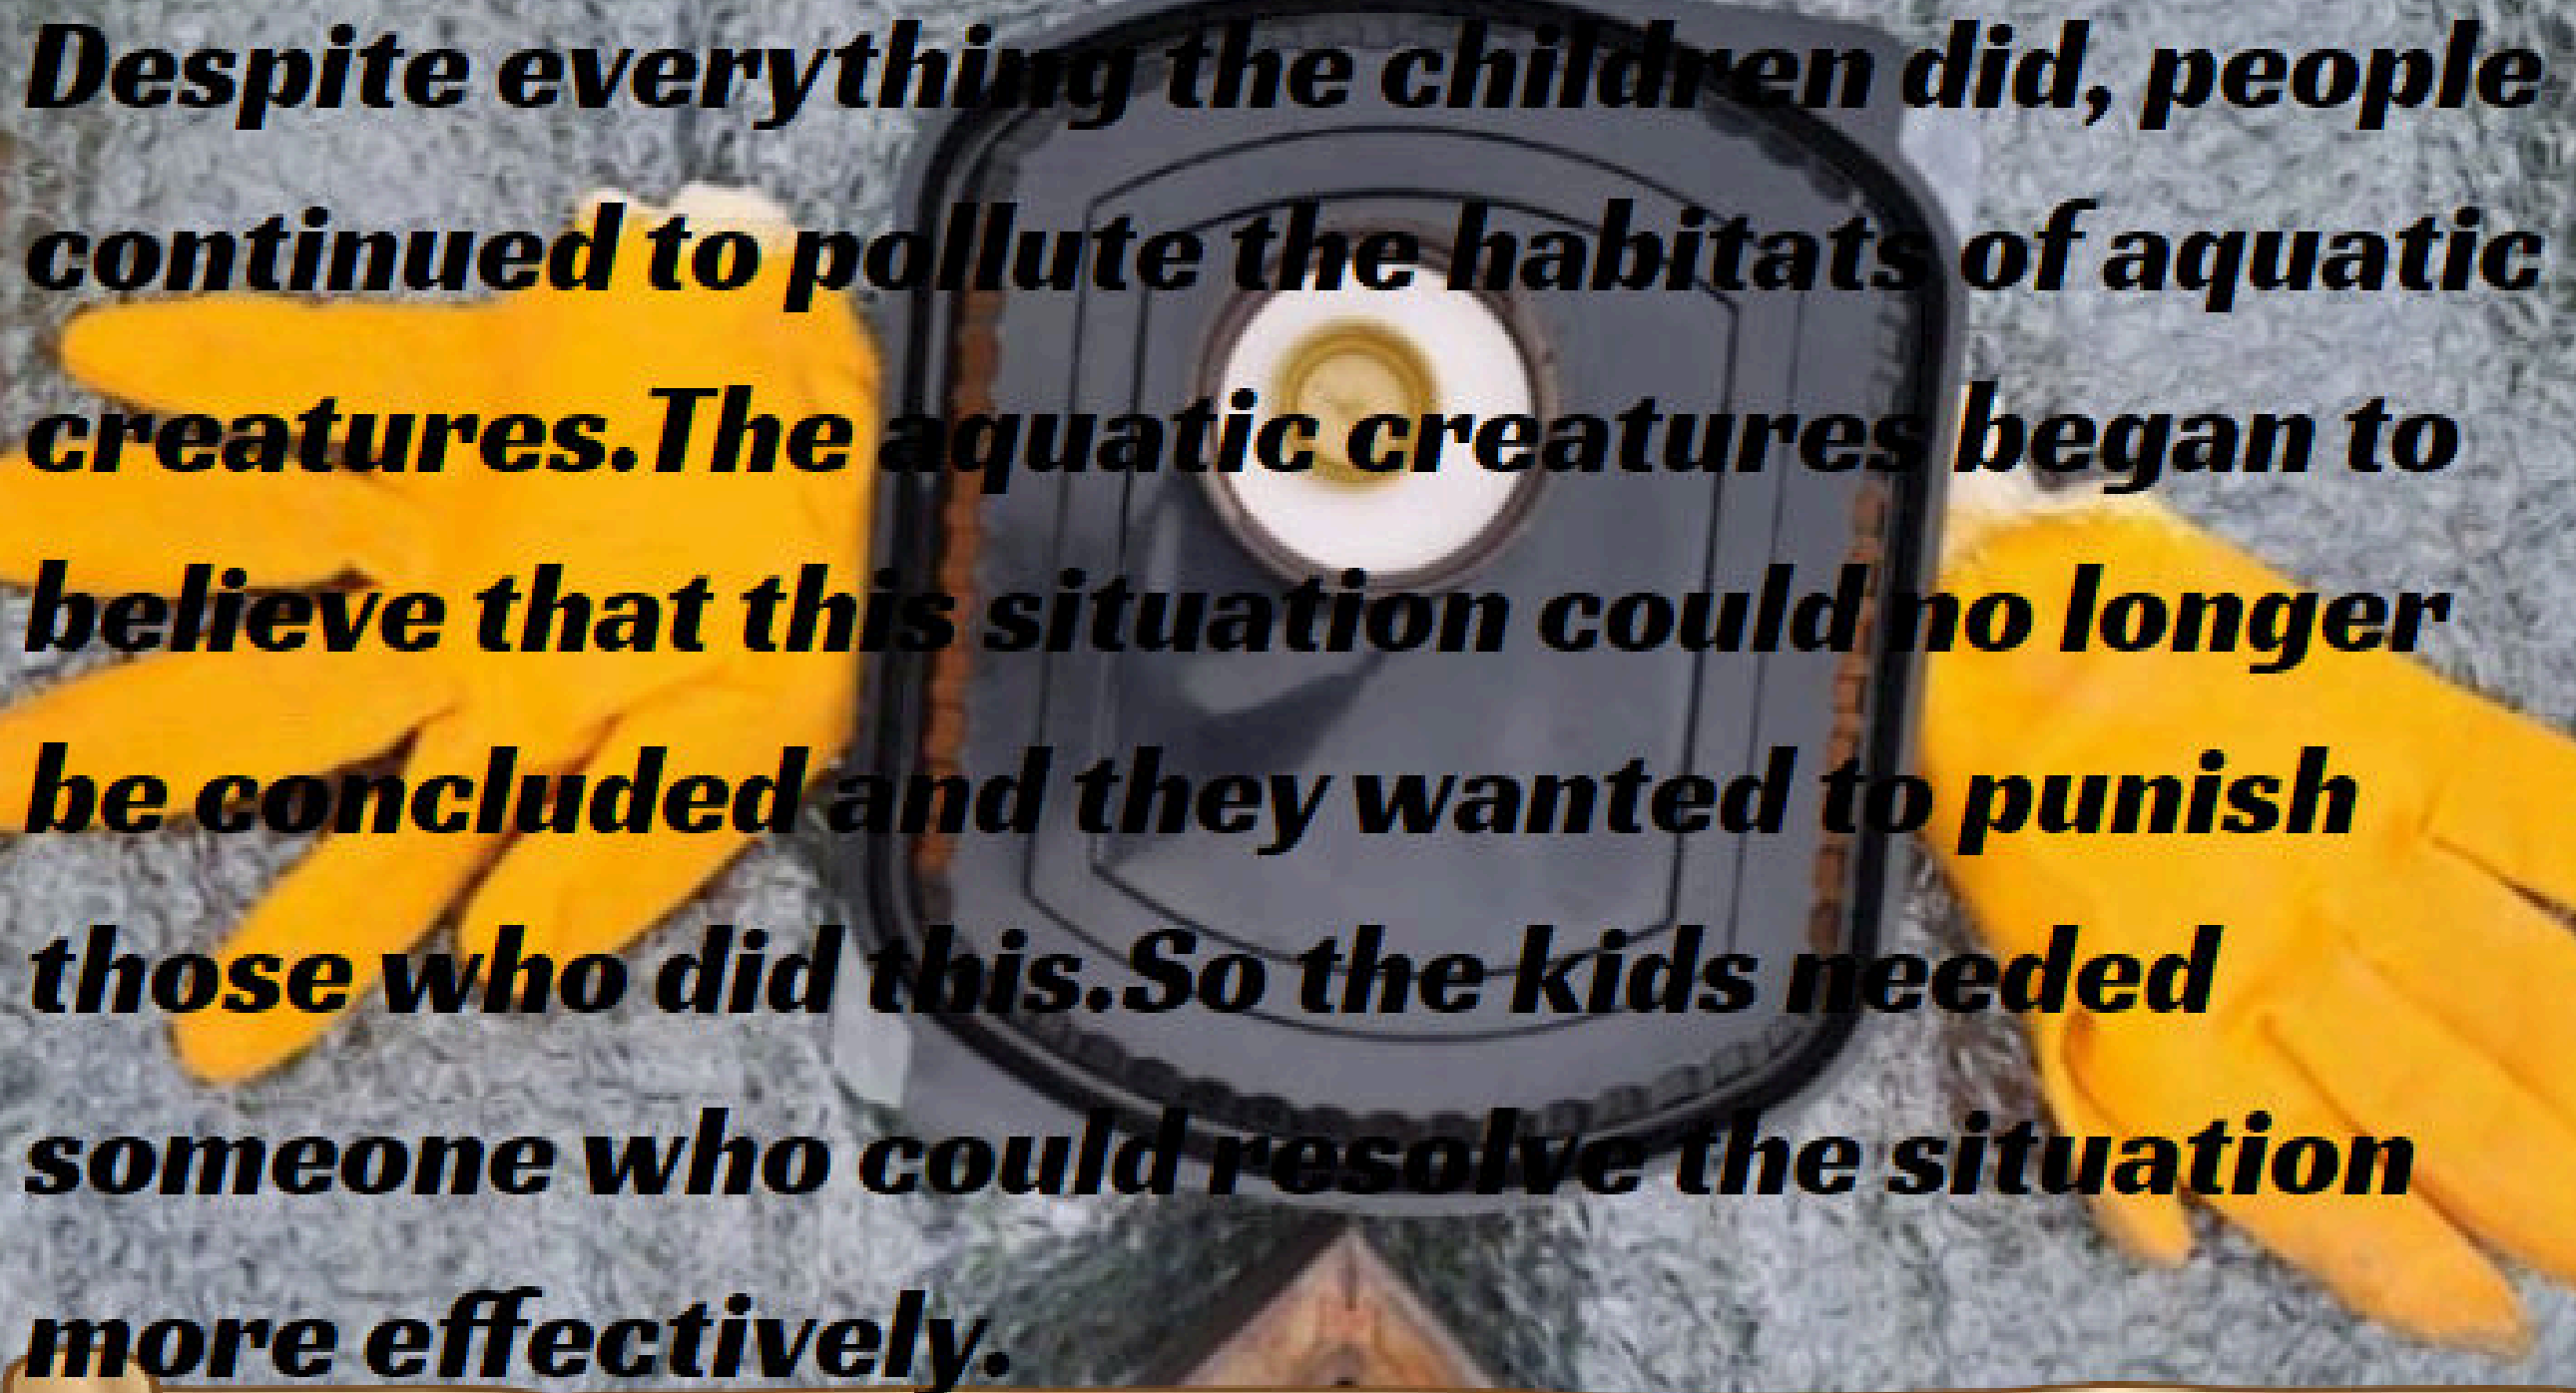

An illustration of a beach scene. In the foreground, there is a large pile of colorful trash, including plastic bottles, paper, and other debris. In the background, there are white beach houses on a sandy beach. The ocean is blue, and several sea creatures are visible: a shark on the left, a dolphin on the right, and a whale breaching the water in the center. The sky is light blue with white clouds.

In a good morning people saw a lot trash on their beach houses. When they first see that they didnt understand what happend. But the kids had thought that might related to the sea creatures. They went to the shore and saw the sea creatures and asked them why did them do that such kind of thing.

Filipe SANTOS (Agrupamento de Escolas Rodrigues de Freitas, PORTO)

Warning: Your text is cutoff.

Despite everything the children did, people continued to pollute the habitats of aquatic creatures. The aquatic creatures began to believe that this situation could no longer be concluded and they wanted to punish those who did this. So the kids needed someone who could resolve the situation more effectively.

They went to municipality, They explained what happened, and the mayor who heard this wanted to have a conversation on the waterside with the chief rulers of the ocean kingdom. The agreement was made, the agreement was for all people to protect all waters. Those who did not do this would be punished. Municipal authorities had cleaned the area mentioned by the orange fish with boats. Thus, the tension between humans and aquatic creatures was resolved.
